                                                                                  The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of projectin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뮻
                                                                        ilgand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for demontia, depression, hyperkinetic prophylactic or therapeutic agent for demontia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, hyperprolactinaemia, hypercholesterolaemia, hyperolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyper-lipidaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hypersent brain ischaemia, epilepsy, amylotrophic lateral scierosis, acute myocardial infarction, infertility, spinocerebaliar degeneration, clipogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-SEP-1996;

                                                                                                                   Š
                                                                                                                                       CC ligand polypeptids corresponding to amino acid residues 31 to 52 of the C sequence represented in AAW3183 and is used in an assay to monitor CC idgand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a modulator. This ligand could have specific applications as a cc prophylactic or therappeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, crauma, growth hormone secretory disease, hyper- and polyphagia, for hyperipidaemia, hyperchoiestcrolaemia, hyperglyceridaemia, for consciousness and polyphagia, cc translent brain ischaemia, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, cc translent brain ischaemia, epilepsy, amyiotrophic lateral sclerosis, according to accuratility, spinocerebellar degeneration, CC constends and consciousness and/or collegalantia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cc activation of the G protein-coupled rsceptor protein.

                                                                                        cc derived ligand corresponding to amino acid residues 34 to 53 of the sequence in AAW31368 and is used in an assay to monitor ligand binding to the groteln-coupled receptor protsin. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. CC this ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, cc disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, cc growth hormone secretory disease, hyper- and polyphagia, hypercholesterolaemia, hyperglyceridaemia, hyperflipidaemia, hypersprolactinemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinemia, diabetes, cancer, pancreatitis, renal disease, transient brain ischaemia, amylotrophic lateral scierosis, acute myocardial infarction, spinocerebeilar degeneration, bone fracture, ctrauma, atopic dermatitis, osteoporosis, asthma, epilapsy, infertiity candyor oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus account of the grotein-coupled receptor protein.

                                                                                                                                                                                            ce describes an agent for modulating prolactin secretion which comprises a certification of describes an agent for modulating prolactin secretion which comprises a certification. The agents for modulating prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal certifion in a domestic mammal and as an aphrodistat. The agents for certification in a domestic mammal and as an aphrodistat. The agents for prolacting prolactin secretion can be used for treating or preventing prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromogaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, certification can be used for treating or preventing composed. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing certification can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function can be used for treating or preventing composed placental function, abnormal ilpidmetabolism or oxytocia.

The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a g protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, acromegaly, Chiari-Frommel, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal inpidmetabolism or oxytocia.

Clear agent for modulating prolactin secretion which comprises a

nagent for modulating prolactin secretion which comprises a

clear agent for modulating prolactin secretion can be used for

protein. The agents for promoting prolactin secretion can be used for

tresting or preventing hypowearianism, gonecyst cacogenesis, menopausai

syndrome, euthyroid or hypometabolism. They can by used for promoting

lactation in a domestic mammal and as an aphrodistac. The agents for

inhibiting prolactin secretion can be used for treating or preventing

pituitary adenomatosia, brain tumour, emmentopathy, autoimmune disease,

prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

cromegaly, Chiari-Frommel syndrome, Argonz-del Castilo ayndrome,

The inhibitory agents can also be used as contraceptives. The agents for

modulating placental function can be used for treating or preventing

choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

can absorbed the proper contraction of the contraction of th

CC which is a ligand for the protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cella transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC function of the pituitary, central nervous system, pancreas and other CC ellypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; polsoning by heavy metals or drugs; CC diseases; creutzfeld-Jakob disease; and many others, also to improve post-CC operative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC enlated sequences; in receptor-binding assays; for production of Ab and CC animals. The present sequence represents a bovine genome-derived ligand polypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAW95191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pitultary-derived ligand polypeptide; G-protein coupled orphan receptor; gpR10; UHR-1; modulator; pitultary; central nervous system; pancreas; tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Patkinson's disease; Huntington's disease; drug; creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; aecretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;

                                                                              The invention relates to a murine pituitary-derived ligsnd polypeptide CC which is s ligand for the G-protein coupled orphan receptor designated CC GPRID (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC function of the pituitary, central nervous system, pancreas and other CC fusues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the smount of receptor in a CC sample and to rsise sntibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disesse; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disesse; poisoning by heavy metals or drugs; CC disease; Schizophrenia; disorders of growth hormone secretion; cancer; CC coperative nutritional status and ss vssopressor. Transgenic snimals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-binding assays; for production of Ab and CC related sequences; in receptor-binding assays; for production of Ab and CC renthody. Sequences and primers; to identify cellulates which can be used for the preparation of snti-ligand polypeptide encoding assays; for production of Ab and CC antisers; which can be used for the preparation of snti-ligand polypeptide.

                                                                                                                                                                This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its sait for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before snd after expulsion of placenta, uterine recovery failure, csesaresn section, stoppage of artificial fertilization or galactostasis and is slso applicable in veterinary medicine for promoting milk production in cow, goat and plg. This sequence represents a bovine peptide which acts ss an oxytocin secretio
                                                                                                                                                                                                                                                                                                                                          Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as injugs for diseases relating to oxytocin secretion and in veterinary

```

Pred. No. is the number of results predicted by chance to have a score greator than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Title: Perfect score: Sequence: US-09-446-543A-73\_COPY\_11\_21 50

1 XRGIRPVGRFX 11

Scoring table:

Searched:

BLOSUM62 Gapop 10.0 , Gapext 0.5

105224 seqs, 38719550 residues

Total number of hits satisfying chosen parameters: 105224

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I- FUNCTION: Stimulates prolactin (PRL) release and regulates expression of prolactin through its receptor GPRIO. May Sti actotrophs directly to secrete PRL.

-I- TISSUE SPECIFICITY: MEDULLA OBLONGATA AND NYPOTNALAMUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-MAY-2000 (Rel. 39, Created)

CATALTYIC ACTIVITY: ATP-dependent breakage, passage and rejoining
of double-stranded DNA.
SUBUNIT: MADE UP OF TWO CHAINS. THE A CHAIN IS RESPONSIBLE FOR DNA
BREAKAGE AND REJOINING; THE B CHAIN CATALYZES ATP HYDROLYSIS. THE
ENZYME FORMS AN A2B2 TETRAMER.

-I-SUBURIT: Homodimer.
-I-ALTERNATIVE PRODUCTS: 3 lacforms: Alpha (shown here), beta and gamma; are produced by alternative splicing.
-I-TISSUE SPECIFICITY: Predominantly expressed in liver. While the alpha form is also expressed in splicen, lung, muscle, prostate and peripheral blood mononuclear cells, the beta form is expressed in all tissues tested, albeit weakly.
-I-DISEASE: Defects in TFR2 are a cause of hereditary hemochromatosis type III (HFE3), HFE3 is a disorder of iron hemostasis resulting in iron everload and has a phenotype indistinguishable from that of hereditary hemochromatosis (HH). HH is characterized by

Since the disease complications can be effect prevented by regular phiebotomies, early diagnosis is important to provide a normal life expectancy to the subjects.

Submitted (FEB-2000) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: CAN METABOLIZE THE AFLATOXIN B1 (AFBL) PROTEIN-BINDING
-I- FUNCTION: CAN METABOLIZE THE AFLATOXIN B1 (AFBL) PROTEIN-BINDING AFBL DIALCOHOL. COULD BE
INVOLVED IN PROTECTION OF LIVER AGAINST THE TOXIC AND CARCINGENIC
EFFECTS OF AFLATOXIN B1. ACTS AS A 2-CARBOXYBENZALDEHYDE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              [3]
